About Me

I am an exceptionally motivated and enthusiastic person who is deeply passionate about software development. My skill set includes expertise in C#, front-end technologies like JavaScript, React, CSS, and HTML. Additionally, I possess a solid understanding of databases, particularly MySQL and MongoDB.I am particularly drawn to the intersection of technology and finance, and I am always on the lookout for the latest trends and emerging technologies in both fields.

Education

Gaziosmanpasa Univeristy — Computer Engineering (BE) Sept 2019 - June 2024

Experience

Atakum Municipality — Frontend Web Developer July 2023 - August 2023

Material UI Next.js React TypeScript

- Creating responsive and user friendly components using Material UI and React
- Designing and creating a fully fledged landing page

E-Karus — Fullstack Web Developer August 2023 - September 2023

AWS Next.js React TypeScript Redux JavaScript TypeScript

- Developing state of the art e-commerce web sites
- Addressing challenging issues to enhance the security of payment systems backend.

Featured Projects

BiFrost

React MaterialUI Next.js MongoDB Tailwind JavaScript NodeJS

BiFrost is a revolutionary project that is still in development aiming to merge traditional banking practises with new cutting edge web3 technology. bifrost-ivory.vercel.app/

ShakeLang

TypeScript Deno

A functional programming language with object supports. With poem like syntax using old shakespeare English. github.com/delledev/Shakelang

Simple Regex Explorer

React Next.js TypeScript

This TypeScript project is a concise Regular Expression Compiler, providing efficient tokenization, AST generation, and NFA compilation for streamlined handling of regular expressions.

IdentiFi

Solidity Web3.js JavaScript

IdentiFi is a backendless service that leverages blockchain technology to create and maintain data, ensuring inherent transparency and security. This proof-of-concept application focuses on functionality over aesthetics, built using Solidity on the Ethereum blockchain and currently deployed on the Sepolia testnet. With all backend processes running on the blockchain, there is no need for a traditional backend server.
